

LIVING RESUME · LAST UPDATED JULY 25, 2026 · EDITABLE IN-BROWSER

Oluseye Shay Amusa

Founder & AI Product Design Architect

Founder of Idea Factory and Atanda and the Junglenomics FORGE Institute. Author & Creator of *Context Craft: The Emergence of Cognitive Engineering — The Last Human Skill*, and creator of THE ARK HARNESS, a certified AI production system. Builds cognitive-engineering infrastructure — methodology, certification standards, and software platforms — for specifying, governing, and deploying AI agents.

— Houston, TX— shay@atanda.ai— +1-832-531-5233— ATANDA Publications Forum

KEY PROJECTS

What I've built

Five projects under one ecosystem — click "More" on any card for detail, or switch on Edit Mode above to revise anything in place.

ATANDA

ACTIVE

AI PRODUCT DESIGN & PUBLICATIONS PLATFORM

The presentation layer and publishing imprint of the ecosystem — the ATANDA Command Centre (production floor for turning a specification into a certified, sellable cognitive asset) and the ATANDA Publications Forum (thought-leadership imprint for whitepapers, op-eds, and methodology writing).

Built on a three-tier architecture — a Next.js presentation tier, a capability tier (the School, the Production Floor, the Compass), and a data tier that turns production activity into a governed training corpus. ATANDA is where the Junglenomics methodology becomes a used product rather than a private framework.

FORGE.BONSAI

ACTIVE

PRODUCTION METHODOLOGY

The certification pipeline at the center of the ecosystem — a staged production process (F0 through F9.5) plus

HIVE MATRIX's 14-dimensional certification, that takes a raw idea through discovery, design, development, testing, optimization, deployment, and evolution before it's called production-grade.

FORGE.BONSAI is the discipline layer underneath every other project here — the Context Craft 7-Pillar framework, Atomic Prompt 7-tuple specification, JCSE 0–50 scoring, and ZPOS+5 token-compression standard all sit inside it. Nothing ships without passing through its quality gates.

Context Craft

PUBLISHED

THE EMERGENCE OF COGNITIVE ENGINEERING — THE LAST HUMAN SKILL

A character-driven book teaching the Context Craft 7-Pillar framework (System · Role · Instruction · Example · Constraint · Format · Data) through case studies — a Goldman-trained mentor, a manufacturing transformation, a CFO rebuilding a finance function under board pressure — instead of a dry technical manual.

Each chapter maps to one pillar and tracks a character's measurable progress on the same underlying framework used across the FORGE.BONSAI methodology — the book and the software are two expressions of one specification discipline.

 [Read My Book](#)

THE ARK HARNESS

ACTIVE

COGNITIVE-ENGINEERING PLATFORM

A subscription platform that treats the specification of intent — not code generation — as the defensible layer of the AI-agent economy. One interface, three capability faces: The School (career intelligence), The Production Floor (the FORGE.BONSAI harness and creator tools), and The Compass (sectoral AI-resilience intelligence).

Every build, sale, and failure on the platform is captured as governed telemetry and assembled into a training corpus — the platform's own use becomes a compounding data asset rather than a discarded byproduct.

PROMPTX v2

ACTIVE

PROMPT ENGINEERING TOOL — LIVE DEMO

A three-function, fully offline prompt engineering tool built on the Context Craft and ZPOS+5 methodology: a 7-pillar Context Craft Maker, a ZPOS+5 token compressor with live cost savings, and an Atomic Prompt atomizer — wired with htmx, bundled with zero external dependencies, zero API calls.

Every engine runs as deterministic local JavaScript — nothing typed into it ever leaves the page. It's the same specification discipline used across FORGE.BONSAI, packaged as a single downloadable HTML file anyone can run offline on desktop, tablet, or phone.

Systems I've engineered

The vocabulary underneath every project above — a proprietary framework for specifying, certifying, and governing AI cognitive artifacts.

Atomic Prompt 7-Tuple

Context Craft 7-Pillar

Super Prompt Card (SPC)

PromptWare Design Document (PDD)

FORGE F0-F9.5 Pipeline

JCSE 0-50 Scoring

HIVE MATRIX 14-Dimensional Certification

GRO Governance (5-State Machine)

ZPOS+5 Token Compression

SAVANT Portability Protocol

Camelot Roundtable Agent Architecture

Honesty Gate G3

Let's talk

Open to Jobs, Contracts, Projects, partnership, investment, and collaboration conversations.
